Welcome fellow cattlemen to our first mini production sale! When Craig stopped for coffee and asked our thoughts on this idea, we were surprised and overwhelmed. The Simmsational Sale, in our eyes, is one of the most prestigious events of the year. For those of you that don't know us, Bonchuk Farms is a family operation consisting of grain, cattle and a passion to do it all well. Our herd consists of 500 breeding females, Fullbloods, Reds and Blacks. We also incorporate an intensive AI and embryo transfer program. We started using Simmental bulls in 1972 and got serious into purebreds in 1982. Any cattle not meeting replacement criteria are fattened for slaughter with home grown grain and marketed accordingly. We are following genetic lines to improve carcass data and tenderness traits. We have held five successful bull sales and the sixth one is in the works for March 18/07 in Brandon Heartland Stock Yards. The bred heifers on offer are the top end of our Fullbloods females we really hold in high regard. These are the type of females that we have built our program around. Several are bred to Double Bar D Everest 4R, the high selling polled bull at Dimler's Sale. We are extremely pleased to be involved in the Everest syndicate. We also have some bred to Three Sixes and the old master's, Houston and Metro. Also on offer is an exceptionally attractive polled open daughter of Three Sixes. We have worked hard on our program, it is always ongoing. We strive to raise cattle that will work in the purebred and commercial man's programs. With all the difficulties in the cattle industry we can still get very excited about the Simmental's we raise. Our diversity keeps our breed ahead of others in our eyes. Looking forward to visiting with you. If there is anything we can assist you with please feel free to call on us or Craig. The coffee pot is always on.

Sincerely, The Bonchuk Crew

Bred to Double Bar D Everest 4R -P627816- on April 14. No exposure.

158R is an exceptional genetic opportunity. She will be a typical full Fleckvieh Houston daughter - attractive, deep bodied, excellent temperament and above average milking ability. Her pedigree is enriched with some outstanding cow power like Miss Knight 156S, Riverbend Maria and Great Guns Mitzi, females that have influenced the Fleckvieh sector for years and will continue to do so. Mated to Double Bar D Everest, the high selling polled, full Fleckvieh bull of 2006, provides an exciting combination. With 158R's impeccable pedigree, the resulting full Fleckvieh calf, polled or not, will impact the industry, and promote massive genetic advancements.

Bred to Double Bar D Everest 4R -P627816- on April 23. No exposure.

Rich with maternal power this sound, feminine heifer will raise tremendous calves. The combined economical and maternal traits of Houston and Meister will complement the polled blood of Everest. The resulting progeny will be unique and an outstanding contribution to the polled gene pool. Out of a hard-working cow that has raised us many modest herd bull raising females, this heifer is no exception and is hard to part with. Fully pigmented, this female will be an intriguing lot on sale day.

Bred to BHR Three Sixes L666E -T600899- Mar 28/06. No exposure.

3 generations polled, this sweet little Houston daughter is dark red, pigmented and full of genetic interest. It all goes back to a tiny cow, 344F that we bought from McMillen's. She still continues to outproduce herself. Combined with Houston's maternal siring abilities, 179R's blood is thick with economical traits and productive longevity. The exploding appeal in quality polled cattle will make 179R a brilliant contribution to an innovative breeding program.

Our first set of Gent females and this dynamic little heifer has it going on. Dark red, broody and that incredible depth of rib that Gent sires into all his progeny. Her dam, 73M is a powerhouse female that provides an amazing genetic advantage. 187R is bred early to the high selling Polled bull, Everest. Combined with her own exclusive genetics, the resulting progeny could be bred advancing and provide monumental progress for the polled sector.

If longevity and production are traits you require when selecting, then your journey ends here. 47R's dam is one of the great matriarchs of our program. The 56E cow has raised a top calf every year of her life. Her bull calves have sold to top commercial herds and she has another one for next year's sale. Only one daughter has sold and the rest we have kept for ourselves with good reason. Like 47R, they are all deep bodied, wide hiped, broody females. She is one of the top prospects in our offering and we know she is bred to work. Bred early to the high selling polled bull, Everest, sweetens this opportunity even more. You can be sure that we had a hard time agreeing to sell this heifer based on our years of breeding. Believing, and knowing what works... This heifer will work.

The Houston-Jasper cross has worked for us in every sense of the word and 86R is no exception. We know she will make a fantastic and hard working cow. We have a full sister that is a very consistent producer that maintains her body condition while weaning above average calves. 86R will repeat her sister's history. Docile, feminine and very attractive, this heifer profiles beautifully, and bears all the Houston progeny characteristics. The mating to Everest will ensure a calf that demands respect for it's productivity, outcross genetics and substantial contribution to the industry.

Bred to Anchor T Metro -T341756- on March 28. No exposure.

Bred with great success in our heifer pen, the now deceased Richmond Regis has sired this eye appealing, flashy, and sound example of his contribution to our genetic base. 148R's dam is a top producing Houston daughter, whose remarkable depth of rib is reflected in 148R. A solid addition to any program, her full brother will sell at the Better Beef Brand Bull sale in the spring, which further proves her predictability as a sound investment. Carrying an early service to Metro, there are no question marks on this lot, just an opportunity to make money.

Bred to Double Bar D Everest 4R -P627816- on April 11 and May 23. No exposure.

A full Fleckvieh female with a powerful pedigree. Sired by Native Son, the main herd sire at Anchor D Simmentals, and mothered by our flush cow, 54L. A combination of industry leading genetics, 54L has raised us many saleable sons and daughters, some of which work in the established herds of McMillen Ranching and Little Willow Creek Ranch. Not to be overshadowed by Dora Lee Franchesca, who could write her own page of all the top progeny she has contributed to the Fleckvieh world. BLCC 234R will inject power, predictability and an elite pedigree held in high regard into all her offspring.

Bred to Anchor T Metro -T341756- on March 29. No exposure.

A deep ribbed matron, this brood cow in the making comes from a long line of productive cattle. With her dark red hair coat, goggles, and strong maternal characteristics, this heifer stands out. Being bred to Metro, we know how excellent that cross has worked. We are confident that if she has a bull you could have a new herd sire. That said, a heifer calf out of this mating will mature into a hard working, economical cow with a predictable genetic contribution.

Bred to Anchor T Metro 4E -T341756- on April 6. No exposure.

68R is an eye catching daughter of Regis that comes from a very predictable background. We have sold sons and daughters of the 157H cow that have gone to work in top commercial herds. Genetic examples of hard working, reliable, sound uddered and mild temperament flood this pedigree and 98R is a reflection of that. An early service to Metro ensures that this flashy female is an intelligent venture worth pursuing.

Bred to Double Bar D Everest 4R -P627816- on April 20. No exposure.

When Craig came out to select this summer, he was very impressed with Gent and his daughters. 120R has been a standout since birth. She is loose made, displays exceptional volume and is one of the broodiest females we have ever sold. We don't usually let this type of female leave the farm. Her dam is an outstanding Houston daughter with a square, balanced udder, and sound phenotype. Build a breeding program around 120R's fleshy capacity, predictability, and impressive genetics. Bred to Everest, her first progeny will be formidable and as 120R matures into brood cow status you can be sure the best is yet to come.

Open.

A dark red, smooth polled, blaze faced heifer calf sired by Three Sixes. 27S is fancy, thick, and sound. She will turn heads and draw attention for all the right reasons. Depth of body, thick hair coat, and that balance and proportional structure all combine to create this little beauty. Her dam is genetically predisposed to power, predictability and color. The polled gene can be traced back to the 11K cow. South African influence, strong polled blood and outstanding color all equal an exciting and rare opportunity. Don't pass by the chance to own the mother of what could be the next high selling polled bull.
